

**HemoCue® hemoglobin systems provide accurate results in about 60 seconds.**

### **Total Assurance for Immediate Care**

- Reduced turnaround time and lab accurate results provide clinicians critical information needed to quickly implement treatment plans.
- Laboratory-quality test results can impact blood transfusion decisions, especially when performed just before a decision to transfuse is made.
- Provides potentially actionable results without sending a sample to the lab – an important consideration for critical care patients.
- Quickly detects the presence and severity of anemia, allowing for immediate action and follow-up steps.

### **User Friendly and Low Maintenance**

The HemoCue® Hb 201 DM is not only simple to use but also easy to maintain.

- Three easy steps provide lab-quality results in about one minute
- Suitable for capillary, venous or arterial blood samples
- Does not require calibration between cuvette batches

**HemoCue® hemoglobin analyzers—reliable results right now.**

## Lab-quality Results Anytime, Anywhere

When response time is critical, treatment decisions can't wait for delayed hemoglobin results. In about one minute, hand-held HemoCue® Hb 201 DM systems provide the same quality and accuracy you expect from a reference lab hematology analyzer.

### Additionally, HemoCue® hemoglobin systems:

- Require only a 10µl capillary, venous or arterial blood sample.
- Automatically compensate for turbidity due to high white cell counts and lipemia.
- Have QC management and lockout features to help ensure the right procedures are followed and correct results are reported.
- Use data management and data transfer capabilities to connect to a central data management server.
